

Nashville/Davidson County Public Health Region, 2022

112 persons were newly diagnosed with HIV

21% received a late diagnosis

→ Persons diagnosed with HIV Stage 3 (AIDS) within 12 months of a new HIV diagnosis are considered a **late diagnosis**, indicating delayed awareness of HIV status and missed opportunities for prevention efforts.

Most affected subpopulations by number of persons newly diagnosed with HIV

Non-Hispanic black men, MMS	34
Hispanic men, MMS	16
Non-Hispanic white men, MMS	14
Non-Hispanic black men, HET	12
Non-Hispanic black women, HET	8
Non-Hispanic black transgender persons	6
Non-Hispanic white men, IDU	4

MMS: male-to-male sexual contact; HET: heterosexual contact; IDU: injection drug use

84% were linked to HIV care within 30 days of diagnosis

95% were linked within 365 days

4,332 persons were living with diagnosed HIV

67% were virally suppressed

→ When HIV medication reduces the amount of HIV virus in a person's body to a low enough level (<200 c/mL), they are considered **virally suppressed** and will not transmit HIV through sexual contact.
