Child care assistance (per 1,000 children age 0 to 12)	90	11.9	24.9	47.8%	50

Hawkins

Overall

At 57th, Hawkins County is in the bottom half of Tennessee counties in child well-being. The county's strongest area was Health.

Strengths

Hawkins's strongest indicator is the percent of children without health insurance, where the county ranks 8th. The county also performs well in the percent of high school students who graduated on time at 96.3%.

Opportunities

The county's biggest challenge is in the percent of children who are living in single parent families, where it ranks 82nd. There are opportunities for improvement in the percent of children in the county who are food insecure as well.

Policy/Practice/Program Options to Improve Outcomes

Many of these policies have multiple models for delivery, including public-private partnership, non-profit partners and community engagement.

Single-parent families often have fewer resources—both financial and time—to help children achieve success in school and beyond. Connecting families with services to reduce these burdens helps their children thrive. Paid parental leave and other family-friendly work policies can improve single parents' ability to be involved in their children's daily lives without sacrificing financial stability, while supports for single parents to complete education and training help those who lack such stability. Additionally, broadening services times and appointment availability to meet varying working hours can reduce the time-strain and need to take off work for a single parent. The Tennessee Department of Human Resources Child Support Division can help connect single parents to legal supports to ensure they receive any child support or other benefits they are due.

Household food insecurity is driven by both cost and lack of access. It can carry a certain stigma, sometimes preventing individuals from accessing available resources. For those qualified, enrollment in programs such as SNAP, WIC, and TANF is essential. Food pantries play an important role, with some models allowing families to choose just items they need, both reducing waste and improving clients' sense of control over their situation. School breakfast and lunch are important tools as well. Providing free breakfast and lunch for all students reduces administrative burdens associated with finding and serving only those qualified and reduces the stigma students can experience. Community food drives always provide welcome resources, but food banks are often able to make money donations go farther. They work with retailers to pay reduced prices, allowing them to purchase what is most needed with cost efficiency.

Indicator Definitions and History

Children living in poverty - Percent of children living in a household below the federal poverty line. Source: US Census Bureau Small Area Income and Poverty Estimates (2021).

Severe housing cost burden - Percent of households spending 50% or more of their income on housing. Source: American Community Survey, 5-year estimates (2017-2021). New to the county profiles, it replaces Fair Market Rent. It is more closely aligned to a KIDS COUNT national indicator, does not apply only to rental housing, and is a rate rather than a dollar value.

Child care cost burden - Child care costs for a household with two children as a percent of median household income. Source: Produced by the University of Wisconsin Population Health Institute using The Living Wage Calculator (2022) and Small Area Income and Poverty Estimates (2021). This is new to the rankings and replaces Median Household Income (MHI). We wanted an indicator expressed as a percentage rather than a dollar amount as well as one that related to a common family expense. Income is already somewhat measured in poverty estimates. In addition, this indicator uses MHI in its calculation.

3rd to 8th grade reading proficiency - Percent of third- to eighth-grade students who scored "on-track" or "mastered" on the Tennessee Comprehensive Assessment Program (TCAP) reading and language test. Source: Tennessee Department of Education (2021-22).

3rd to 8th grade math proficiency - Percent of third- to eighth-grade students who scored "on-track" or "mastered" on the Tennessee Comprehensive Assessment program (TCAP) math test. Source: Tennessee Department of Education (2021-22).

Youth graduating high school on time - Percent of ninth-grade cohort that graduates in four years. Source: Tennessee Department of Education (2021-22).

Children who are food insecure - Percent of children who sometimes lack access to adequate food. Source: Map the Meal Gap (2021). This is new to the rankings and replaces child and teen death rates, which, because the Department of Health has tightened its data suppression rules, is no longer available for all counties. We did not have an indicator for all counties to line up with overweight/obesity data in the national ranking, so we searched for an one related to nutrition and healthy eating.

Children who lack health insurance - Percent of children who lack health insurance. Source: US Census Bureau Small Area Health Insurance Estimates (2020).

Babies born at a low birthweight - Percent of live births where baby weighs less than 2,500 grams (5.5 pounds), averaged over three years. Source: Tennessee Department of Health (2019-21), with three counties estimated using American Community Survey 5-year data (2015-19, 2016-20, 2017-21). It has been in our county profiles from the beginning, though it was previously just one-year data. The Department of Health has tightened its data suppression rules, and dozens of counties' data were unavailable with one-year numbers. Three-year numbers still left three counties suppressed. Those were estimated from 5-year American Community Survey data.

Children living in single parent families - Single-parent households as a percent of all households with children. Source: American Community Survey, 5-year estimates (2017-2021). New to the county profiles, it replaces births to unmarried females, which in turn replaced teen births. As the Tennessee Department of Health tightened its data suppression rules, teen birth data was no longer available for all counties. Children born to unmarried females was always an attempt to roughly estimate teen births using different data. In moving from actual counts to ACS 5-year estimates, we decided to use this indicator over teen births as it affects families with parents of all ages.

Children who are chronically absent - Children who are absent 10 percent or more of school days for any reason, including excused/unexcused absences and out-of-school suspensions. Source: Tennessee Department of Education (2021-22). New to the county profiles, it replaces school suspensions, which have suppressed data for many counties.

Victims of abuse or neglect per 1,000 - Child victims of abuse or neglect. In cases with multiple children each child is counted individually. The total is the number of children associated with substantiated cases of severe abuse and of determinations of "Services Court Ordered" or "Services Needed" in cases of non-severe abuse or neglect. Children with multiple cases during the year are counted only once. The rate is per 1,000 children. Source: Tennessee Department of Children's Services (2021). This has been in our county rankings from the beginning, but we have moved to counting children rather than cases.
