Per Capita Income, Metro Areas

The United States' per capita personal income in 2009 was \$39,635, down from \$40,674 (2.6 percent less) in the previous year.

Per capita personal income is the annual total personal income of residents divided by the residential population as of July 1. Personal income is derived by summing the net earnings by place of residence, person's rental income, personal dividend/interest income, and transfer payments. Personal income excludes income tax deductions and other personal taxes and is reported in current dollars. In simpler terms, it is the total income on the front page of your 1040 tax form. This data can be influenced by large growth (or decline) in population, natural disasters (i.e., flooding or hurricanes), commuting populations (those that primarily work in other counties), and state and local taxes.

The data from all the nonfarm employment estimates tables include all full- and part-time nonfarm wage and salary employees who worked during or received pay for any part of the pay period that includes the 12th of the month. This is a count of jobs by place of work. Agricultural workers, proprietors, self-employed persons, workers in private households, and unpaid family workers are excluded. These numbers may not add due to rounding. Data is based on the 2010 benchmark.
